

## Cardiovascular risk calculation for AMEs

If a cardiovascular risk assessment is needed under EASA regulations 1178/2011 or 2015/340, the Danish Civil Aviation and Railway Authority accepts calculations performed using the ESC CVD Calculation App released by the European Society of Cardiology. Ensure compliance with this procedure when conducting cardiovascular risk assessments for aviation purposes.

For more information and for link to download from Google Play or App store please see : <https://www.escardio.org/Education/ESC-Prevention-of-CVD-Programme/Risk-assessment/esc-cvd-risk-calculation-app>. The calculator is unfortunately not available for PC/Mac desktop usage.

### Direction for use

1. Choose "Find right calculator"
2. Click on *Up to 10 year cardiovascular risk*
3. Answer the questions according to applicant data.
4. The app will suggest a risk calculator
5. Choose the suggested calculator

6. Choose country and select the specific country of residence.
7. Click on next and input data as needed
8. Push calculate.

9. Print or email and save the report
10. Keep the report in your file management system including documentation of the values used.

**•If forwarding the risk report to CAA DK:**

- Forward the risk report to CAA DK.
- Include the name on the report.
- Attach a lab printout of the values used.
